implementation of key requirements

EFFICIENCY

10x

more vendors actively monitored vs. before\*

COMPLIANCE

100%

alignment with DORA + PCI DSS third-party requirements

## Overview

myPOS is an all-in-one financial platform providing payment solutions, card acceptance, and business banking tools. As a regulated fintech operating across Europe, maintaining a robust vendor risk posture is a core compliance obligation.

By partnering with WiseBee, myPOS moved from periodic, manual checks to continuous, automated monitoring of their entire supply chain.

### INDUSTRY

Fintech / Payments

### REGION

Europe

### MERCHANTS

### USE CASE

TPRM + Supply Chain Risk

### FRAMEWORKS

DORA + PCI DSS

## The Challenge

### Manual Processes Under Regulatory Deadlines

myPOS needed to evolve its manual Third-Party Risk Management (TPRM) process into a robust, automated system aligned with requirements from the Digital Operational Resilience Act (DORA) and Payment Card Industry Data Security Standard (PCI DSS).

- **Manual TPRM:** Assessments were managed across multiple tools and spreadsheets, which worked well initially but, as the company scaled, led to disconnected workflows, limited standardization, and increased manual effort.
- **Growing regulatory demands:** With DORA enforcement approaching, the need for a more scalable, structured approach to continuous supply chain risk monitoring became increasingly important.
- **Limited Ongoing Visibility:** Risk assessments were largely point-in-time, making it difficult to maintain continuous awareness and confidently track vendor risk throughout the year.

Previously, the process was fragmented and time-consuming. With WiseBee, we now have a much clearer view of what is happening with our vendors, not just once a year but at all times.

## The Solution

### A Flexible, Rapidly Deployed Framework

myPOS evaluated several solutions and chose WiseBee for its unique combination of agility and specialized compliance modules.

- **Agile Implementation:** WiseBee's team collaborated closely with myPOS to implement specific requirements within a single quarter.
- **DORA-Specific Capabilities:** The platform served as a central repository for the DORA register of information, helping simplify complex submissions.
- **Vendor Collaboration:** The ability to invite vendors directly into the platform allowed for easier remediation of findings.

## The Impact

### From Periodic Reviews to Continuous Monitoring

Since implementing WiseBee, myPOS has seen a significant improvement in their security operations:

- **10x Scale in Monitoring:** The team now actively monitors roughly 10 times more vendors than what was previously possible through their manual set-up.
- **Audit Efficiency:** Audit preparation time has been significantly shortened. Instead of searching for evidence, the team provides auditors with system screenshots and history logs directly from WiseBee.
- **Streamlined Reporting:** High-level risk distribution and major alerts are now reported weekly to the Board and Executive Committees with ease.
- **Proactive Incident Response:** Continuous alerts provide real-time insights into the dark web and vendor attack surfaces, enabling faster response to risk and potential incidents.

*WiseBee gives you a structured and practical way to manage third-party risk and stay aligned with DORA without adding unnecessary complexity. It also makes audits much smoother and gives you continuous visibility over your vendor risk landscape."*

**Boryana Kulinska** Head of Cybersecurity GRC · myPOS

For myPOS, WiseBee isn't just a tool; it has become a key part of the company's compliant vendor management process, helping the team confidently demonstrate a mature security posture to regulators and stakeholders alike.

## About WiseBee

WiseBee is a closed-loop, AI-native External Risk Platform built for lean security teams. It unifies internal vulnerability scanners, cloud posture, external attack surface, and vendor risk into one prioritized fix list, helping teams reduce noise, strengthen compliance visibility, and move from findings to action.
